

## **F2 MEGAWATT HOURS AND SOLAR TECHNOLOGY DISTRIBUTION**

The allocation of renewable energy in the Development Focus Areas (DFAs) was done in megawatts (MW), see Appendix F1. Additionally, the allocation did not distinguish between solar photovoltaic (PV) and solar thermal as the DRECP assumes the same acres of disturbance per MW for all solar technologies. However, for the analysis of some resources, the MW hours (MWh) are used rather than the total MW and distribution of the solar technology is important.

This appendix provides tables with MWh and solar technology distribution for each alternative. The calculation of the MWh used the hours per MW from the 2013 Integrated Energy Policy Report Draft Lead Commissioner Report; see Table 18, California's RPS Portfolio, December 2012 and the notes page of this Appendix.

The distribution of the solar MW into solar PV and solar thermal technologies used the percentage of the total solar projects proposed for each technology in the Plan Area from 2008 to the present; see the notes page of this Appendix.

INTENTIONALLY LEFT BLANK

solar sub-totals are not counted in total MW

## NOTES

### Calculation of % Solar Thermal vs Solar PV

Percent is based on evaluation of projects proposed in Plan Area from 2008 to present:

-- 21 percent of MW were solar thermal and 79 percent of MW were solar PV.

-- The Alternatives contain between 1,952 MW and 3,089 MW of solar thermal, and the Preferred Alternative has 2,528 MW of solar thermal and 9,509 MW of solar PV

### Calculation of MWh from MW

$$h = \text{GWh} * 1000 / \text{MW}$$

From 2013 IEPR Draft Lead Commissioner Report at: <http://www.energy.ca.gov/2013publications/CEC-100-2013-001/CEC-100-2013-001-LCD.pdf>

#### See Table 19

#### 2022 numbers

Solar = 2246 hrs per MW

Wind = 2781 hrs per MW

Geothermal = 7216 hrs per MW

#### Table 18

#### 2012 numbers

Solar = 2150 hrs per MW

Wind = 2926 hrs per MW

Geothermal = 5159 hrs per MW

Note - the IEPR provides two hrs per MW numbers, one for 2012 and one for 2022. The MW numbers for 2012 were used for this estimate.

Note - IEPR included only one GWh amount for solar technology - they did not differentiate between solar technologies.
