We believe the proposed development is not acceptable.

We are concerned about the potential impacts on human health, wildlife, and the environment. The proposed development would have a significant impact on the surrounding area. It would be a large project that would require the destruction of a substantial amount of natural habitat. This would have negative consequences for the local ecosystem.

We urge that the following be considered:

- Protecting natural habitats
- Minimizing the impact on wildlife
- Enhancing the quality of life for local residents
- Ensuring the safety and well-being of people in the area

The project must be designed to minimize its impact on the environment and to protect the health and safety of the local community. We strongly recommend that the project be modified to address these concerns.

Sincerely,

F184-1 Thank you for your comment. No change in the document is required as a result of this comment.

F184-2 The BLM has taken this comment into consideration in developing the BLM LUPA and Final EIS.

F184-3 The BLM has taken this comment into consideration in developing the BLM LUPA and Final EIS.

F184-4 The distributed generation alternative does not meet BLM’s purpose and need. Distributed generation was considered but not carried forward, as discussed in Volume II, Section II.8.2.1. BLM lands are largely devoid of buildings and distributed generation is applicable in locations with both electrical demand and areas or surfaces available for installation of distributed generation technology.
